Ian Ingram

Technical Project Manager · Business Analyst · AI Product Builder

Yonkers, NY (646) 957-2337 ingram.ian@gmail.com amenti.live github.com/ianingram

SUMMARY

Technical project manager and business analyst with 15+ years running implementations, UAT and data migrations at Citi, Nielsen and Philips Healthcare. For the past three years, I have independently designed and built an AI platform end to end on Claude and Gemini APIs, from architecture and cost control to shipped product.

EXPERIENCE

2023 – Present

Independent AI Product Developer · Amenti Platform (self-directed)

- Built Amenti.live, an AI platform for conversing with 2,000+ historical figures grounded in primary sources, on Claude and Gemini APIs behind a Cloudflare Workers layer.
- Own the product end to end: scoping, architecture, cost control, QA and documentation in 100+ public technical briefs.
- Shipped Ask Amenti, a self-generating quiz library, Amenti Studios audio productions of classic novels, a Living Map of the ancient world and Three.js browser games.
- Run GannLab, a pre-registered market research lab; a 117-event screen from 8,320 SEC filings showed a −38.7% median six-month return across five walk-forward windows.

1/2022 – Present

Tennis Coach, USPTA Certified · NYJTL Eagle Academy after-school program; Trevor Day School, 2013

- Run skill, fitness and match-play development for student players; schedule built around independent product work.

2017 – 11/2022

Philips Healthcare · Technical Consultant; BMET II, Patient Monitoring Specialist

- Led clinical network installations and system upgrades from staging through go-live, advising clinical leadership and engineers on timelines.
- Inspected, calibrated and repaired patient monitoring systems in active clinical environments.
- Led patient-safety practices: incident reporting, clinical incident documentation and daily safety briefings.
- Coordinated asset delivery and pre-install staging; tracked go-live events for new equipment and reported deliverables to management.

2/2015 – 1/2016

Westchester Medical Center · Technical Consultant

- Managed a product recall end to end: tracking, issue resolution, progress reports and recommended actions.
- Analyzed drug-delivery system data against business and regulatory measures.
- Wrote test plans and QA measures for clinical devices through a major vendor transition.

2/2013 – 7/2014

Nielsen Entertainment · Project Manager, User Acceptance Testing

- Designed application data schematics for the Music Connect / SoundScan integration and documented the cost and efficiency of data calls.
- Developed the UAT strategy for the Music Connect accounting platform.
- Wrote use cases for MicroStrategy integration with legacy Nielsen platforms.

10/2010 – 1/2013

Citi Private Bank · Business Analyst, Pershing NetX360

- Defined client onboarding and data-migration requirements and scheduled account migrations.
- System admin for the NetX360 trading platform: UAT, back-testing, user support and client training.
- Worked with engineering and management on platform stability, release timing, upgrades and product roadmaps.

4/2006 – 1/2010

Citigroup Emerging Markets · Business Analyst, Analytics & Operational Risk

- Produced daily pricing reports for the institutional FX desk and settled institutional currency trades.
- Applied statistical methods to isolate recurring trade failures; ran operational-risk meetings and loss-reduction procedures.
- Wrote Python scripts for trade capture and risk monitoring.

8/2000 – 1/2005

PC Mall · Enterprise Sales Executive

- Enterprise technology sales to capital markets firms, including TheStreet.com and Charles Schwab.

SELECTED PROJECTS

Data integrity

Primary-source library and citation audit

- Built the evidence base the platform answers from: 56 reading rooms holding 712 primary-source works (speeches, letters, histories) in named, public-domain editions.
- Wrote an automated audit that grades every work CITED, LINKED, DATED, THIN or EMPTY and blocks any commit adding an unsourced text; 92% are cited to a findable edition such as a Project Gutenberg number, and none are uncited.

AI product

Ask Amenti · source-grounded Q&A

- Search-first by design: names and fragments resolve against local indexes with no model call; only a real question spends money.
- Every quotation is checked against the text fetched that turn and marked verified, from a librarian's note, or unmatched; a tally prints even on clean answers so readers can see the check ran.
- Answers only from shared registers (roster, library, events), so a wrong answer exposes a wrong record; this caught and fixed a figure misdated by more than a century.

Architecture

Conversation and voice engine

- Separated thinking from speaking: Claude composes the in-character reply, Gemini renders the voice, and a Cloudflare Worker routes between them, so either vendor can change without retuning the other.
- Bounded each conversation to a 14-message window, so a three-hour conversation costs the same per turn as the first.
- Archived rendered audio instead of caching it briefly, so audio cost scales with distinct content rather than audience size.

Cost analysis

Measured AI unit economics

- Built and measured the real prompt instead of estimating: $0.0138 per turn, with the system prompt making up 57% of input.
- Compared levers side by side (lean prompt, shorter window, smaller model, caching) and showed prompt caching saves 22–33% with no loss of quality, breaking even on the second turn.

Research

GannLab · pre-registered market research

- Each hypothesis is a numbered probe with pass rules written before results are read; failures stay on the record.
- Rejected popular geometric trading signals on the evidence (r = 0.021) and kept volatility clustering as the one clear survivor; data from SEC EDGAR, Yahoo Finance, CBOE and JPL ephemerides.

SKILLS

Project & analysis	Implementation and go-live management, UAT, requirements and functional documentation, data migration, QA and test planning
AI & technical	LLM and text-to-speech APIs, JavaScript, HTML/CSS, Python, Cloudflare Workers, GitHub
Domain	Financial services (FX, operational risk, trading platforms), healthcare technology, media data

EDUCATION & CERTIFICATIONS

Andrews University — B.S., History / Political Science
USPTA — Certified Tennis Professional
